

Business Requirements Document

Wash

Version: v1.0

Document Control

Project Name	: Washing Module	Date: 30-Aug-2026
Document Title	: Date-wise Balance Dashboard (Fabric & Garments)	
Prepare Basis	: Requirements gather from wash production department	
Section Covered	: Filter Section; Report Matrix Grid	
Primary User Role	: Wash Production Team	
Status	: Approved baseline for development	
Business Analyst	: Merajul Islam	

Revision History

Ver.	Date	Description	Author

1. Background

In RMG and garment washing/dyeing manufacturing operations, managing the flow of materials – ranging from raw/dyed fabric rolls (measured in KG/Rolls) to assembled panels and garments (measured in Pcs) – across multiple processing stages presents severe tracking challenges. Existing manual or disconnected tracking mechanisms suffer from delayed balance reconciliations, high error rates in running cumulative totals, and limited visibility into order fulfillment status against buyer purchase orders. To overcome these operational bottlenecks, an enterprise-grade, web-based interactive tracking dashboard is required. This module acts as a central control panel that continuously pulls operational data from Merchandising & Marketing (M&M), Batching, Store Receive, and Dispatch/Delivery modules, giving stakeholders real-time visibility into daily movement and order-level cumulative balances.

2. Goal & Objective

Goal: To deploy a scalable, real-time tracking dashboard within the Enterprise ERP to unify material receiving, batching, and delivery operations across Garments, Fabric, and Cutting Parts views.

Objectives:

- ▶ **Real-time Tracking:** Provide live updates on daily received, daily delivered, cumulative received, and cumulative delivered quantities.
- ▶ **Dual-View Granularity:** Enable seamless tab-switching between Garments (Pcs-based tracking) and Fabric & Cutting Parts (KG and Roll-based tracking).
- ▶ **Automated Running Balances:** Eliminate manual calculations by dynamically deriving cumulative balances line-by-line based on entry timestamps.
- ▶ **Data Integration:** Seamlessly bridge the Merchandising & Marketing (M&M) Master data, Batching operations, Store Receive inputs, and Gate Pass Delivery outputs into a unified visual board.

3. Scope

In-Scope:

- ▶ Dynamic data filtering by Unit, Date Range, and Global Search string.
- ▶ Multi-Tab Dashboard Interface:
 - View 1: Garments (Metrics: Order Qty, Receive Qty, Cum. Receive Qty, Delivery Qty, Cum. Delivery Qty in Pcs).
 - View 2: Fabric & Cutting Parts (Metrics: Order Qty (Kg), Batch/Lot, Dia, Receive Roll/Qty, Cum. Receive Qty, Delivery Roll/Qty, Cum. Delivery Qty).
- ▶ Server-side event-driven running balance engines for cumulative calculations.
- ▶ Exporting & Reporting: Export filtered data grid views to Excel (.xlsx) and PDF formats.

Out of-Scope:

- ▶ Connection require order Receive & Delivery gate passes for the dashboard.

4. Business Process Flow

6. Business Rules

6.1 Functional Requirements

ID	Rule
FR-1.1	The dashboard must load filtered records only after the user executes a search with mandatory Unit, From Date, and To Date selections.
FR-1.2	Cumulative calculations (Running Total) for Garments / Fabric must partition by Job, Order, Style, Color and Dress Part.
FR-1.3	Global Search can use after perform search based on filter criteria. Here user can search anything within the reporting grid and reporting grid will filter based on the global search.

6.2 Field Mapping (Garments)

Source	Header Label	Data Type	Behavior
Filter Bar	Unit*	VARCHAR(50)	Dropdown, Mandatory. By default Concept Knitting Ltd. (Wash Unit)
Filter Bar	From Date*	DATE	Date Picker, Mandatory.
Filter Bar	To Date*	DATE	Date Picker, Mandatory. To Date by default current date but can be editable
Filter Bar	Global Search	VARCHAR(100)	Free-text inline filter.
Receive & Delivery Operation	Date	DATE	Format should be dd-mmm-yy
Receive Operation	Receive From	VARCHAR(10)	Source Unit (Unit short code)
Receive Operation	Buyer	VARCHAR(50)	Buyer Name
Receive Operation	Job	VARCHAR(50)	Production tracking job code.
Receive Operation	Order	VARCHAR(50)	Buyer Tracking
Receive Operation	Style	VARCHAR(50)	Buyer Tracking
Receive Operation	Color	VARCHAR(50)	Garment/Fabric color name.

Source	Header Label	Data Type	Behavior
Receive Operation	Dress Part	VARCHAR(50)	Component category (Top, Bottom, Garments)
Batch Operation	Wash Type	VARCHAR(50)	Process type (Garment Dyeing Complete, Normal Wash).
Receive Operation	Fabric Composition	VARCHAR(50)	Fabric construction
Receive Operation	GSM	INT	Fabric weight per square meter
Receive Operation	Fabric Con. per Dzn	DECIMAL(4,2)	Fabric use to make 1 dozen of garments
Receive Operation	Order Qty (Pcs)	INT	Total order quantity
Receive Operation	Shipment Date	Date	Target Ex-Factory Date
Receive Operation	Receive Qty (Pcs)	INT	Inward Transaction Qty (Pcs)
Calculated Field	Cum. Receive Qty (Pcs)	INT	Running SUM of Receive Qty
Dispatch Operation	Delivery Qty (Pcs)	INT	Outward Transaction Qty (Pcs)
Calculated Field	Cum. Delivery Qty (Pcs)	INT	Running SUM of Delivery Qty
Dispatch Operation	Approval / Trail	INT	Sum of Approval / Trail qty in dispatch for a order
Calculated Field	Balance Qty (Pcs)	INT	Cum. Receive Qty (Pcs) - Cum. Delivery Qty (Pcs)

6.3 Field Mapping (Fabric & Cutting Parts)

Source	Header Label	Data Type	Behavior
Receive Operation	Batch / Lot	VARCHAR(20)	Batch for fabric & Lot for catting parts
Receive Operation	Dia	INT	Diameter of finish fabric
M&M Module	Order Qty (Kg)	DECIMAL(12,2)	Total order quantity
Receive Operation	Receive Roll	INT	Inward Roll Count
Receive Operation	Receive Qty (Kg)	DECIMAL(12,2)	Inward Fabric Weight (Kg)
Calculated Field	Cum. Receive Qty (Kg)	DECIMAL(12,2)	Running SUM of Receive Qty (Kg)
Delivery Operation	Delivery Roll	INT	Outward Roll Count
Delivery Operation	Delivery Qty (Kg)	DECIMAL(12,2)	Outward Fabric Weight (Kg)
Calculated Field	Cum. Delivery Qty (Kg)	DECIMAL(12,2)	Running SUM of Delivery Qty (Kg)
Calculated Field	Balance Qty (Kg)	DECIMAL(12,2)	Cum. Receive Qty (Kg) - Cum. Delivery Qty (Kg)

7. Non-Functional Requirements & Assumptions

- **Performance:** Dashboard grid rendering and aggregation query execution must complete within < 1.5 seconds
- **Usability:** Responsive UI components optimized for desktop displays with high contrast grid readability. UI must feature fixed sticky headers and frozen left-hand primary key columns (Job/Buyer/Order/Style).
- **Export Capability:** Grid contents must export accurately to Excel and PDF formats matching displayed visual formats.

8. Acceptance Criteria

ID	Rule
AC-1.1	Selecting Unit, From Date, and To Date and clicking Search displays accurate aggregated records matching floor logs.
AC-1.2	Calculated fields (Cum. Receive Qty, Cum. Delivery Qty) accurately match formula outcomes.
AC-1.3	Typing into the Global Search field filters rows across Buyer, Job, Style, Order, and Color fields instantaneously.
AC-1.4	Exporting to Excel/PDF retains design.

9. Conclusion

This BRD provides the functional foundation, database models, and operational business rules required to build the Date-wise Balance Dashboard module. By bridging upstream merchandising data with real-time shop-floor store transactions, this dashboard ensures complete inventory transparency, operational traceability, and streamlined balance reconciliations across garment and fabric processing operations.
