

Business Requirements Document

Wash

Version: v1.0

Document Control

Project Name	: Washing Module	Date: 30-Aug-2026
Document Title	: Order-Wise Balance Dashboard (Fabric, Cutting Parts & Gmts)	
Prepare Basis	: Requirements gather from wash production department	
Section Covered	: Filter Section; Report Matrix Grid	
Primary User Role	: Wash Production Team	
Status	: Approved baseline for development	
Business Analyst	: Merajul Islam	

Revision History

Ver.	Date	Description	Author

1. Background

The purpose of this Business Requirement Document (BRD) is to define the functional, operational, and technical specifications for the implementation of the Order-Wise Balance Dashboard. Currently, tracking movement between production units (Receive) and delivery back to garments or clients (Delivery) relies on fragmented reporting. This system establishes a real-time, consolidated enterprise reporting module within the ERP to track material flow across two distinct perspectives: Fabric & Cutting Parts (Weight-based in Kg) and Garments (Piece-based in Pcs). The dashboard will automate inventory balance calculations, track operational wash statuses, enhance visibility into shipment schedules, and reduce raw material/finished goods variance.

2. Goal & Objective

- ▶ Establish a real-time enterprise ERP dashboard to track order balance across both Fabric & Cutting Parts (Kg) and Garments (Pcs) views.
- ▶ Automate computation of Receive Balances, Delivery Balances, and Ready for Delivery quantities.
- ▶ Provide full operational visibility into wash floor execution statuses (e.g., Dryer Running, Hydro Running, Acid Wash Running, Size Set, Off Shade) to ensure on-time buyer shipments.

3. Scope

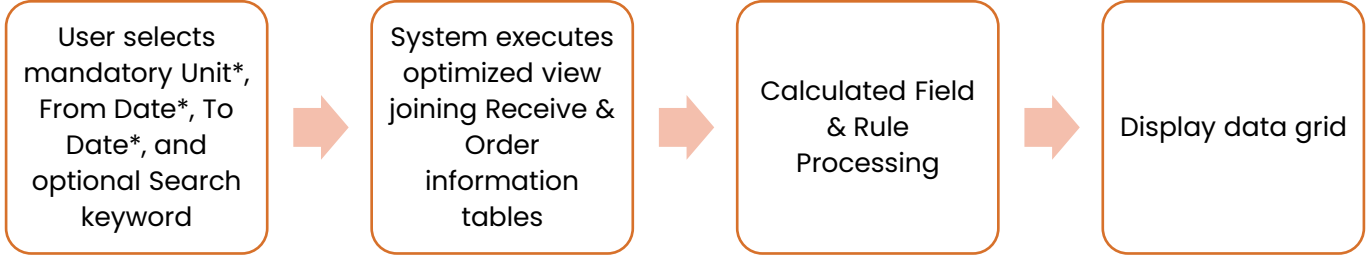

In-Scope:

- ▶ Dual-view dashboard module (Fabric & Cutting Parts and Garments).
- ▶ Global filtering (Date Pickers, Unit, Receive From, Global Search)
- ▶ Dataset export to Excel.
- ▶ Auto-calculation engine for inbound/outbound balances.
- ▶ Interactive inline field updates for floor status tracking (Wash Status, Remarks).

Out of-Scope:

- ▶ Connection require order Receive & Delivery gate passes for the dashboard.

 4. Business Process Flow

 5. Business Rules

5.1 Functional Requirements

ID	Rule
FR-1.1	Dashboard must feature a toggle or tab selection to switch seamlessly between Fabric & Cutting Parts (Kg) and Garments (Pcs) views.
FR-1.2	Cumulative calculations (Running Total) for Garments / Fabric must partition by Job, Order, Style, Color and Dress Part.
FR-1.3	The filter panel must support Unit, Receive From, From Date, To Date, Global Search, Generate Excel, and Clear controls.
FR-1.4	Global Search can use after perform search based on filter criteria. Here user can search anything within the reporting grid and reporting grid will filter based on the global search.
FR-1.5	Excel export must generate a spreadsheet containing only the dataset active under current UI filters.

5.2 Field Mapping (Garments)

Source	Header Label	Data Type	Calculation / Mapping Rule
Filter Bar	Unit*	VARCHAR(50)	Dropdown, Mandatory. By default Concept Knitting Ltd. (Wash Unit)
Filter Bar	From Date*	DATE	Date Picker, Mandatory.
Filter Bar	To Date*	DATE	Date Picker, Mandatory. To Date by default current date but can be editable
Filter Bar	Global Search	VARCHAR(100)	Free-text inline filter.
Receive & Delivery Operation	Date	DATE	Format should be dd-mmm-yy
Receive Operation	Receive From	VARCHAR(10)	Source Unit (Unit short code)
Receive Operation	Buyer	VARCHAR(50)	Buyer Name
Receive Operation	Job	VARCHAR(50)	Production tracking job code.
Receive Operation	Order	VARCHAR(50)	Buyer Tracking
Receive Operation	Style	VARCHAR(50)	Buyer Tracking
Receive Operation	Color	VARCHAR(50)	Garment/Fabric color name.
Receive Operation	Dress Part	VARCHAR(50)	Component category (Top, Bottom, Garments)
Batch Operation	Wash Type	VARCHAR(50)	Process type (Garment Dyeing Complete, Normal Wash).
Receive Operation	Fabric Composition	VARCHAR(50)	Fabric construction
Receive Operation	GSM	INT	Fabric weight per square meter

Source	Header Label	Data Type	Calculation / Mapping Rule
Receive Operation	Fabric Con. per Dzn	DECIMAL(4,2)	Consumption in Kg per dozen of garments
Receive Operation	Order Qty (Pcs)	INT	Total order quantity
Receive Operation	Shipment Date	Date	Target Ex-Factory Date
Receive Operation	1 st Receive Date	DATE	First date(dd-mmm-yy) of order receive in wash
Receive Operation	Last Receive Date	DATE	Latest date(dd-mmm-yy) of order receive in wash
Receive Operation	Total Receive Qty (Pcs)	INT	Sum of receive quantity within 1 st and last receive date
Calculative	Receive Balance (Pcs)	INT	Order Qty(Pcs) – Total Receive Qty (Pcs)
Dispatch Operation	1 st Delivery Date	DATE	First date(dd-mmm-yy) of order dispatch in wash
Dispatch Operation	Last Delivery Date	DATE	Latest date(dd-mmm-yy) of order dispatch in wash
Dispatch Operation	Total Delivery Qty (Pcs)	INT	Sum of dispatch quantity within 1 st and last delivery date
Calculative	Ready for Delivery (Pcs)	INT	Total QC Qty – Total dispatch Qty
Calculative	Delivery Balance Qty (Pcs)	INT	Total Receive Qty (Pcs) – Total Delivery Qty (Pcs)
Floor Status Dashboard	Wash Status	VARCHAR(20)	Last Batch Status in floor status dashboard

5.3 Field Mapping (Fabric & Cutting Parts)

Source	Header Label	Data Type	Behavior
Receive Operation	Total Receive Roll	INT	Total number of roll receive
Receive Operation	Total Receive Qty (Kg)	DECIMAL(7,2)	Sum of receive quantity within 1 st and last receive date
Calculative	Receive Balance (Kg)	DECIMAL(7,2)	Order Qty(Kg) – Total Receive Qty (Kg)
Dispatch Operation	Total Delivery Roll	INT	Total number of roll dispatch
Dispatch Operation	Total Delivery Qty (Kg)	DECIMAL(7,2)	Sum of dispatch quantity within 1 st and last delivery date
Calculative	Ready for Delivery (Kg)	DECIMAL(7,2)	Total QC Qty – Total dispatch Qty
Calculative	Delivery Balance (Kg)	DECIMAL(7,2)	Total Receive Qty (kg) – Total Delivery Qty (kg)

6. Non-Functional Requirements & Assumptions

- **Performance:** Grid data rendering must execute within 2.5 seconds for date ranges covering up to 90 days.
- **Usability:** UI must feature fixed sticky headers and frozen left-hand primary key columns (Job/Buyer/Order/Style).

7. Acceptance Criteria

ID	Rule
AC-1.1	Toggling between Fabric & Cutting Parts and Garments updates column configurations (Kg vs. Pcs) while maintaining filter states.
AC-1.2	All dynamic balance formulas (Receive Balance, Delivery Balance Qty) compute and display mathematically accurate values upon record entry.
AC-1.3	Typing into the Global Search field filters rows across Buyer, Job, Style, Order, and Color fields instantaneously.
AC-1.4	Clicking Generate Excel exports an .xlsx file containing the exact filtered view data.

8. Conclusion

The Order-Wise Balance Dashboard integrates production floor execution with order management within Concept Knitting Ltd. (Wash Unit). By standardizing real-time balance calculations across weight and piece metrics, this solution mitigates production bottlenecks, prevents stock discrepancies, and ensures delivery schedules align with buyer shipment commitments.
